

LUCO

Martín Azúa

The traditional three-legged stool is the most stable and basic stool. Luco reflects an archetypal idea whilst integrating a contemporary sense. A craftsman with a lathe and a carpenter using CNC technology collaborate in production. The seat and legs of Luco are made of beech wood and the footrest of painted iron. Luco is available in three heights and has been designed and manufactured to withstand heavy use in public areas.

"I am very interested in working with local resources and using different materials and technology that include both innovation and tradition. I do not like the idea of a uniform world where products have an unclear origin and are made of materials that we do not recognize".

ENG Luco is a stool of essential and pure forms, signed by designer Martín Azúa's personal view, who combined three features that absolutely complement each other: the traditional craft of woodturning, technology and the most genuine international design.

ESP Luco es un taburete de formas esenciales y puras, resultado de la mirada de su autor, el diseñador Martín Azúa, quien ha sabido combinar tres aspectos que se complementan perfectamente: la artesanía tradicional de la tornería de madera, la tecnología y el diseño internacional contemporáneo.

CAT Luco és un tamboret de formes essencials i pures, resultat de la mirada del seu autor, el dissenyador Martín Azúa, que ha sabut combinar tres aspectes que es complementen perfectament: l'artesanía tradicional de la tomeria de fusta, la tecnologia i el disseny internacional contemporani.

FRA Luco est un tabouret avec des formes essentielles et pures, dessiné sous le regard de son auteur, le designer Martín Azúa, qui combine trois éléments qui sont complémentaires : l'artisanat traditionnel du tournage sur bois, la technologie et le design international contemporain.

LUCO

General description

Family of 3 stools: big 75cm, medium 60cm and small 45cm. They are made of beech solid wood, finished with water-based varnish.

Both the seat and the 3 feet are lathe manufactured and mechanized with numeric control to achieve the perfect integration of the components.

The four pieces are glued together to enable a correct settlement and appropriate position of the components.

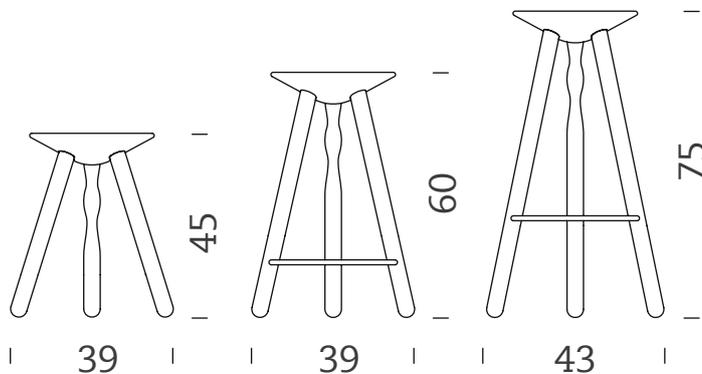

The glue used belongs to the D-2 group, according to DIN EN-204 regulations.

Afterwards, the whole stool is lacquered with water-base varnish without colour. The piece is scrubbed and refined; two layers with a scrub between them and a final coat of water-based varnish.

With this procedure the stool is preserved from the action of atmospheric agents, achieving at the same time physical and chemical resistance.

Footrest of the big and medium stool versions (75 and 60cm) is a T-structure made of a rod with 12 and 14mm diameter, with cataphoresis finish and 80 micron epoxy powder coating, 30% matt, black colour. This structure is fixed to the wood legs by means of 3 screws, DIN 7991 M8, painted in black.
